Ideal Neo is a unique design, simple structures, strong angles and narrow window rebates. They are perfect for newly built and renovated facilities. Ideal Neo is a system based on innovative technologies. One of the additional options is the "bonding inside" technology, which enables exceptional static and thermal parameters to be achieved. Permanent bonding of the glass and the sash reduces the risk of bending and distortion of the sash. This technology ensures the comfort of using the windows for many years.

* The above value of Uw is given for a reference window with dimensions of 1230 x 1480 mm.
