

# INFINITI F – doors with torsion springs (front)

Choose a variant: Aluminium sections

- ✓ durable aluminium sections to be placed anywhere in the gate, including service doors
- ✓ glazing effectively illuminates the interiors of garages, workshops and warehouses
- ✓ a wealth of variants of section configuration allows you to create impressive gates
- ✓ aesthetics and the level of lighting and privacy can be easily adjusted thanks to a variety of acrylic glass used in glazing

**15 m<sup>2</sup>**

maximum size

Aluminium sections can be used in all sectional doors. They work especially well in workshops and warehouses, where good interior lighting is particularly important. They are also chosen in private garages because they are an exceptionally aesthetically attractive addition.

As standard, aluminium sections are available in silver. At the customer's request, they can be painted in any colour from the RAL palette.

The installation of the aluminium section is the same as for the standard panel.
