Chambers

Unico XS Casement is a system of steel windows that open tilt and turn outwards. In the top hung version, fine adjustment of the sash position is possible.

The windows are made of galvanized steel. The welded joints have been ground and polished which increases their aesthetic value. The system uses hidden fittings that do not disturb their appearance. The profiles can be powder coated in any color from the RAL palette.

The thermal parameters of Unico XS Casement are due to two-chamber profiles with a stainless steel thermal break which additionally stabilizes the structure. The tightness of the windows is guaranteed by the use of age-resistant, two-component EDPM synthetic rubber gaskets.

*The above Uw value is given for a reference window with dimensions of 900 x 1300 mm
